COMBINATORIAL PATTERN MATCHING ALGORITHMS IN COMPUTATIONAL BIOLOGY USING PERL AND R

Chapman and Hall/CRC
ISBN-10: 1-420-06973-X
ISBN-13: 978-1-420-06973-0
Hardback
368 pages
1st Edition (2009)

Emphasizing the search for patterns within and between biological sequences, trees, and graphs, **Combinatorial Pattern Matching Algorithms in Computational Biology Using Perl and R** shows how combinatorial pattern matching algorithms can solve computational biology problems that arise in the analysis of genomic, transcriptomic, proteomic, metabolomic, and interactomic data. It implements algorithms in Perl and R, two widely used scripting languages in computational biology.

The book provides a well-rounded explanation of traditional issues as well as an up-to-date account of more recent developments, such as graph similarity and search. It is organized around the specific algorithmic problems that arise when dealing with structures that are commonly found in computational biology, including biological sequences, trees, and graphs. For each of these structures, the author makes a clear distinction between problems that arise in the analysis of one structure and in the comparative analysis of two or more structures. He also presents phylogenetic trees and networks as examples of trees and graphs in computational biology.

This book supplies a comprehensive view of the whole field of combinatorial pattern matching from a computational biology perspective. Along with thorough discussions of each biological problem, it includes detailed algorithmic solutions in pseudo-code, full Perl and R implementation, and pointers to other software, such as those on CPAN and CRAN.

Table of Contents

Foreword			
Preface			
Introduction	1		
I. Sequence Pattern Matching			
Sequences	21		
Simple Pattern Matching in Sequences	43		
General Pattern Matching in Sequences	53		
II. Tree Pattern Matching			
Trees	115		
Simple Pattern Matching in Trees	137		
General Pattern Matching in Trees	155		
		III. Graph Pattern Matching	
		Graphs	181
		Simple Pattern Matching in Graphs	211
		General Pattern Matching in Graphs	247
		A Elements of Perl	275
		B Elements of R	305
		References	339
		Index	351
