 CELL MECHANICS:
 FROM SINGLE SCALE-BASED MODELS
 TO MULTISCALE MODELING**

Chapman & Hall/CRC
 ISBN-13: 978-1-42009-454-1
 Hardcover
 482 pages
 1 edition (Jan 27, 2010)

Ubiquitous and fundamental in cell mechanics, multiscale problems can arise in the growth of tumors, embryogenesis, tissue engineering, and more. **Cell Mechanics: From Single Scale-based Models to Multiscale Modeling** brings together new insight and research on mechanical, mathematical, physical, and biological approaches for simulating the behavior of cells, specifically tumor cells. In the first part of the text, the book discusses the powerful tool of microrheology for investigating cell mechanical properties, multiphysics and multiscale approaches for studying intracellular mechanisms in cell motility, and the role of subcellular effects involving certain genes for inducing cell motility in cancer. Focusing on models based on physical, mathematical, and computational approaches, the second section develops tools for describing the complex interplay of cell adhesion molecules and the dynamic evolution of the cell cytoskeleton. The third part explores cell interactions with the environment, particularly the role of external mechanical forces and their effects on cell behavior. The final part presents innovative models of multicellular systems for developmental biology, cancer, and embryogenesis. This book collects novel methods to apply to cells and tissues through a multiscale approach. It presents numerous existing tools while stimulating the discovery of new approaches that can lead to more effective and accurate predictions of pathologies.

Table of Contents

Part 1: From Subcellular to Cellular Properties	1
Chapter 1. Microrheology of Living Cells at Different Time and Length Scales <i>Atef Asnacios, Sylvie Hénon, Julien Browaeys, François Gallet</i>	5
Chapter 2. Actin-based Propulsion: Intriguing Interplay between Material Properties and Growth Processes <i>Karin John, Denis Caillerie, Philippe Peyla, Mourad Ismail, Annie Raoult, Jacques Prost, Chaouqi Misbah</i>	29
Chapter 3. Cancer: Cell Motility and Tumor Suppressor Genes <i>Rémy Pedoux, Damien Ythier, Alain Duperray</i>	67
Part 2: Single Cell Migration Modeling	85
Chapter 4. Coupling of Cytoplasm and Adhesion Dynamics Determines Cell Polarization and Locomotion <i>Wolfgang Alt, Martin Bock, Christoph Möhl</i>	89

Chapter 5.	How Do Cells Move? Mathematical Modeling of Cytoskeleton Dynamics and Cell Migration	133
	<i>Dietmar Ölz, Christian Schmeiser</i>	
Chapter 6.	Computational Framework Integrating Cytoskeletal and Adhesion Dynamics for Modeling Cell Motility	159
	<i>Angélique Stéphanou</i>	
Part 3:	Mechanical Effects of Environment on Cell Behavior	181
Chapter 7.	History Dependence of Microbead Adhesion under Varying Shear Rate	185
	<i>Sylvain Reboux, Giles Richardson, Oliver E. Jensen</i>	
Chapter 8.	Understanding Adhesion Sites as Mechanosensitive Cellular Elements	221
	<i>Sophie Féréol, Redouane Fodil, Gabriel Pelle, Bruno Louis, Valérie M. Laurent, Emmanuelle Planus, Daniel Isabey</i>	
Chapter 9.	Cancer Cell Migration on 2-D Deformable Substrates	243
	<i>Valentina Peschetola, Claude Verdier, Alain Duperray, Davide Ambrosi</i>	
Chapter 10.	Single Cell Imaging of Calcium Dynamics in Response to Mechanical Stimulation	265
	<i>Tae-Jin Kim, Yingxiao Wang</i>	
Part 4:	From Cellular to Multicellular Models	281
Chapter 11.	Mathematical Framework to Model Migration of Cell Population in Extracellular Matrix	285
	<i>Arnaud Chauvière, Luigi Preziosi</i>	
Chapter 12.	Mathematical Modeling of Cell Adhesion and Its Applications to Developmental Biology and Cancer Invasion	319
	<i>Alf Gerisch, Kevin J. Painter</i>	
Chapter 13.	Bridging Cell and Tissue Behavior in Embryo Development	351
	<i>Alexandre J. Kabla, Guy B. Blanchard, Richard J. Adams, L. Mahadevan</i>	
Chapter 14.	Modeling Steps from Benign Tumor to Invasive Cancer: Examples of Intrinsically Multiscale Problems	379
	<i>Dirk Drasdo, Nick Jagiella, Ignacio Ramis-Conde, Irene E. Vignon-Clementel, W. Weens</i>	
Chapter 15.	Delaunay Object Dynamics for Tissues Involving Highly Motile Cells	417
	<i>Tilo Beyer, Michael Meyer-Hermann</i>
